

## New Product Announcement

### Toyota Prius P110, P111 & P112

**1st Design**

**2nd Design**

We are pleased to announce the availability of TransTec® overhaul kit **2581**. This kit covers the Toyota Prius Hybrid transmission from 2000-3/09. The first generation of the Prius Hybrid transmission has two designs. The first design was designated P110 & P111 and can be easily identified by its six separate generator cables, three in the front and three in the rear of the transmission. This unit also has a pan on the bottom. The second design known as the P112 can be identified by its two generator harnesses containing three cables each. This unit has no bottom pan. The first design was produced from 2000-03 and the second design was produced from 2004-3/09.
